## Collinearity

1. In each question below show whether the given points are collinear or not. Where the points are collinear, state the ratio in which B divides AC.
(a) $\mathrm{A}(1,2,-3)$
B(3,4,-1)
C $(4,5,0)$
(b) $\mathrm{A}(4,2,-1) \quad \mathrm{B}(5,3,0)$
C $(8,6,3)$
(c) $\mathrm{A}(2,0,-1)$
B(2,1,-1)
C $(2,7,2)$
(d) $\mathrm{A}(1,2,-2) \quad \mathrm{B}(2,1,-2) \quad \mathrm{C}(6,-3,-2)$
(e) $\mathrm{A}(-1,0,4)$
B(1,4,2)
C(4,10,-1)
(f) $\mathrm{A}(6,-3,0)$
$B(4,-1,2) \quad C(1,2,5)$
2. In each question below show whether the given points are collinear or not. Where the points are collinear state the ratio $\mathrm{AB}: \mathrm{BC}$.
(a) $\mathrm{A}(1,-2,3)$
B( $3,0,1$ )
C( $8,5,-4$ )
(b) $\mathrm{A}(-8,-6,5) \quad \mathrm{B}(-3,4,0) \quad \mathrm{C}(0,10,-3)$
(c) $\mathrm{A}(3,1,-4)$
B(5,4,0)
C $(9,10,8)$
(d) $\mathrm{A}(-4,-3,6) \quad \mathrm{B}(0,-1,16) \quad \mathrm{C}(6,2,31)$
3. The points $\mathrm{A}(3,-1,2), \mathrm{B}(5,3,1)$ and $\mathrm{C}(11,3 \mathrm{p},-2)$ are collinear. Find the value of $p$.
4. The points $\mathrm{P}(1,-4,2), \mathrm{Q}(\mathrm{a},-6,8)$ and $\mathrm{R}(10,-10, \mathrm{~b})$ are collinear.

Find the values of $a$ and $b$.
5. Given that $\mathrm{M}(2,0,-1), \mathrm{Q}(4,6,3)$ and $\mathrm{P}(5, \mathrm{c}, 5 \mathrm{~d})$ are collinear, find c and d .
6. An aeroplane is flying over the North Sea.

The plane is at position $P$ and can see two oil-rigs $Q$ and $R$. In relation to a given origin the 3 points have coordinates

$$
P(3,1,4) \quad Q(5,3,6) \quad R(8,6,9)
$$

If the plane continues flying in a straight line, will it pass over both Q and R ?
7. Two pieces of pipe are joined at E , as shown opposite. In relation to a given origin the coordinates of points $\mathrm{D}, \mathrm{E}$ and F are

$$
D(3,1,4) \quad E(6,5,10) \quad F(12,13,22)
$$

Are the two pieces of pipe joined in a straight line?

8. In relation to a given origin a tanker is located at a point with coordinates $(-4,-8,8)$. Two hours later the tanker has moved to a position with coordinates $(1,2,3)$.
If the ship continues on its current course will it collide with a stationary submarine sitting on the surface at a position of $(3,6,2)$ ?
